Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** No Likelihood

Weather and chance of precipitation at 800m					
Time					
06:00	09:00	12:00	15:00	18:00	21:00
Heavy Rain	Fog	Light rain	Light rain showers	Light rain	Light rain
Precipitation probability					
60%	20%	30%	30%	60%	60%

Forecast for Sunday 01 Dec 2024

Weather: Extensively cloudy with a spell of locally heavy rain pushing eastward during the first part of the day. Remaining cloudy with patchy drizzle from mid-morning. Patchy showery rain and drizzle through the afternoon with some brighter spells possible in-between; the best of any brighter spells expected across eastern hills. Further spells of mainly light rain expected through the evening, with showers overnight.

Chance of cloud-free hill tops above 800m: Little chance in west, around 30% in east at first, increasing 50% in the afternoon. Lowering again from northwest to 20% during the evening.

Low Cloud and visibility: Persistent cloud 400-600m, with patches to lower levels in heavy rain or drizzle. Bases lifting to around 700m in the east and north east by the afternoon with even some higher summits clearing at times. Cloud bases lowering in evening rain to around 500m once more. Away from cloud, visibility good falling to moderate to poor in rain and drizzle.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Chance of summit gales during the morning with squally winds as the band of heavy rain moves east. Winds easing somewhat through the day but with a noticeable chill effect on summits, despite the mild temperatures.

Forecast for Monday 02 Dec 2024

Weather: Cloudy with outbreaks of showery rain, turning to sleet and snow on higher summits Monday morning. This clearing to the south in the afternoon, leaving bright or clear conditions with a few further showers, wintry at height. The showers dying out inland by evening with long clear spells developing.

Maximum wind: West or northwesterly 25-30mph, gusting 30-40mph. Veering northerly 10-15mph by mid-afternoon.

Chance of cloud-free hill tops above 800m: 10-20% at first. Improving to 70% from midday, mainly in the south.

Low Cloud and visibility: Periods or persistent cloud around 500m, lowering in any wintry precipitation. Cloud becoming occasional above 700m from midday with good breaks developing inland. Good visibility falling to moderate in rain and poor or very poor wintry showers or summit snow.

Temperature: **Valleys:** Plus 7 Celsius at dawn rising to 9 Celsius by day, falling close to Zero in evening.
At 800m: Plus 3 Celsius falling steadily to Minus 1 Celsius through the day.
Freezing level: Above the summits gradually falling to 600m
